With more than 20 years of momentum behind us, a growing international presence, and one of the most talented workforces on the planet, Microsoft's position in the software industry has never been better. Opportunities for bright, talented women are abundant and promising – across the board. It's exciting here. The entrepreneurial atmosphere is every bit as pervasive as it was in the beginning. The main difference is that, today we have more resources and we're involved in more projects. Even our flagship products represent new potential as their popularity continues to grow, locally and globally. In addition to one of the leading compensation and benefits packages in the industry, Microsoft also provides one of the most favorable work environments – casual, comfortable, always open to suggestion – smart and friendly coworkers.

Lincoln Laboratory is part of the Massachusetts Institute of Technology and is operated as a federally funded research and development center. The Laboratory's fundamental mission is to apply science, by means of advanced technology, to critical problems of national security. The character of the problems has broadened from the initial emphasis on air defense to include space surveillance systems. Lincoln Laboratory has pioneered advanced electronics technology. Work in the areas of communications, radar systems, digital data processing, signal processing, and air traffic control extend from basic research through the development of devices and components to the design, construction, and operation of complex systems. Projects are followed from the conceptual stage, through simulation and analysis, to the development of hardware and software, to the ultimate test and demonstration of an integrated system.

Fax: 770.236.4881  
www.scientific-atlanta.com

The worlds of computers, telecommunications, and cable television are converging to make all kinds of new services possible for consumers. Thanks in part to the Internet, people increasingly want to communicate, find information, make purchases, and be entertained in a real-time, interactive environment. They also want that environment to be exciting to look at, with compelling graphics, great sound and full motion, and digital video.

We at Scientific-Atlanta help cable operators deliver the services and environment people want over their central source of information and entertainment, the television set. Our solutions include: the video compression systems that deliver the programming to cable operators; the fiber optic and coaxial cable-based broadband access systems that distribute content to end users; and the set-tops that let consumers receive content on their televisions.
